## COLLEGE OF ARTS AND SCIENCES

## PHYSICS

## Faculty

- Christopher Cline (Chair)
- Julia Kamenetzky

## Program Goals

- Students should develop a good functional understanding of physics, including mechanics, electricity \& magnetism, quantum physics, statistical mechanics, thermodynamics, optics, and relativity.
- Students should develop expert-like problem solving skills.
- Students should develop critical thinking and reasoning skills.
- Students should develop laboratory skills.
- Students should develop technology skills.
- Students should improve their communication, interpersonal, and questioning skills.
- Students should develop and/or retain student cognitive attitudes and beliefs (expectations) that are favorable for learning physics with deep understanding.

## Objectives

The Physics Program offers an academic major leading to the Bachelor of Science Degree. In addition, the program offers an academic and a teaching minor in physics. A Physical Science composite major is offered for students seeking a physical science composite endorsement for secondary education. The program is designed to meet the needs of (1) students intending to specialize in physics and pursue graduate work in physics, engineering, material science, or biophysics; (2) students preparing for a professional career in science and engineering; (3) students desiring to broaden their knowledge of the natural world; and (4) students who wish to teach at the secondary level.

## Program Requirements

Students choosing a double major or minor within the science program may not apply electives to more than one major or minor. Only classes listed under "required courses" that coincide between both majors/minors may be applied to both.

Students must maintain a cumulative 2.3 GPA or better in courses required in the academic majors.
Students must meet the university-wide graduation requirements in addition to the Physics major:

- 124 total hours
- 30 upper division hours
- WCore or Honors College requirements
